

PLAKA – PVC PROFILE TYPE A AND B

Horizontal plastic linear spacers

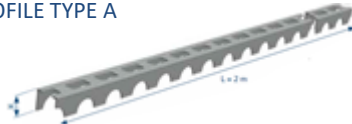

REF 03.02.02 - Version V02 – 03/07/2023

Manufacturer's prescriptions

Description

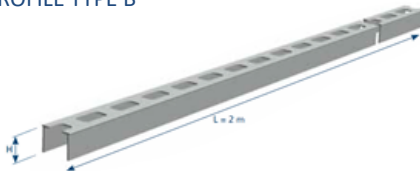

PVC PROFILE TYPE A

The PVC profiles type A and B are linear spacers in PVC, intended to ensure a fixed concrete cover between the formwork and the lower reinforcement layer.

The type A profile has curved lateral recesses, while type B profile presents full side legs without openings.

PVC PROFILE TYPE B

Application fields

The PVC profiles type A are used as spacers for the lower reinforcement layers for concrete slabs concreted on top of a formwork or on hard ground floors. These spacers are not suitable for slabs bearing on soft ground.

The PVC profiles type B are well adapted for use on soft grounds or on rigid insulation panels. For such applications, the profiles must be reversed, side legs upwards.

PVC profiles type A and B are preferably positioned diagonally in relation to the direction of the reinforcements.

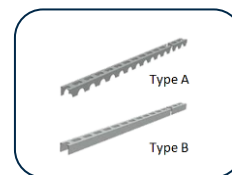

Properties

The lateral curved recesses along the type A PVC profile allow the good penetration of the concrete below the profile and guarantee a good embedding with concrete, in case of the concrete has been properly vibrated. Type B PVC profile has no recesses along the vertical side legs and is therefore more robust.

PLAKA – PVC PROFILE TYPE A AND B
