Standard pipe press seal HSD-SSG

The universal press seal for maximum flexibility on-site.

Standard pipe press seal HSD-SSG

Advantages:

maximum user friendliness thanks to the super segmented ring technology with labelled segments

U-profile press segments made of stainless steel V2A (AISI 304L) or V4A (AISI 316L)

integrated torque control for maximum installation security

blind plugs included - for closing of reserve openings

split/subsequently divisible - for retrofit sealing of already laid cables/pipes

predefined breaking point - for easy removal of segments

Features and technical data:

- application: waterproof concrete stress class 1
- absolutely gas- and watertight
- pipe seal may also be used as blind insert
- for core drillings/wall sleeves \varnothing 100 - 300 mm
- super segment ring technology allows individual adjustment to the cable/pipe diameter on-site
- thanks to the wide application range particularly suitable for storage
- segments with exact diameter indication with predefined breaking points
- U-Profile press segments made from stainless steel V2A (AISI 304L) or V4A (AISI 316L)
- integrated visual and tactile torque control
- sealing width 40 mm
- EPDM rubber

Infinite sealing of pipe \varnothing 18 mm to 252 mm.

The HSD-SSG product range consists of five seals and is the universal solution for infinite sealing of cables/pipes of \varnothing 18 to 252 mm in core drillings/wall sleeves of \varnothing 100 to 300 mm. Thanks to the super segment ring technology the press seal can be adjusted on-site to the required cable/pipe diameter and is thus particularly suitable for stock keeping. All HSD-SSG seals are split and thus also suitable for retrofit sealing. Diameter indications on the segments and integrated torque control considerably increase installation security and shorten installation time.

Standard pipe press seal HSD-SSG

The pipe press seal for universal application.

HSD-SSG material combination NBR and stainless steel V2A (AISI 304L) or V4A (AISI 316L) is used in surroundings where high concentrations of fuel and mineral oil can be expected, e. g. at airports or filling stations. Due to its resistance to methane gas, NBR is ideal for usage in gas storage tanks of biogas plants.

HSD-SSG material combination EPDM and stainless steel V4A (AISI 316L) is first choice for usage in difficult conditions, e.g. in sewage treatment plants and digestion towers or in fermenters of biogas plants. Whenever the application requires robust EPDM and high-quality stainless steel.

Infinite sealing of pipe Ø 18 to 252 mm with only 5 different press seals

Core drilling diameter OD (mm)	Suitable for media pipe diameter OD (mm)	Article code
100 **	18 – 65	HSD 100 - SSG - 18-65-SL quality of steel/quality of rubber
150	70 – 112	HSD 150 - SSG - 70-112-SL quality of steel/quality of rubber
200	110 – 162	HSD 200 - SSG - 110-162-SL quality of steel/quality of rubber
250*	159 – 211	HSD 250 - SSG - 159-211-SL quality of steel/quality of rubber
300*	200 – 252	HSD 300 - SSG - 200-252-SL quality of steel/quality of rubber

* Blind plug not included in scope of delivery. Available as optional accessory.

** NBR version only available with SG-Technology (difference: no labelled segments)

Available stainless steel quality: V2A (AISI 304 L) and V4A (AISI 316L)

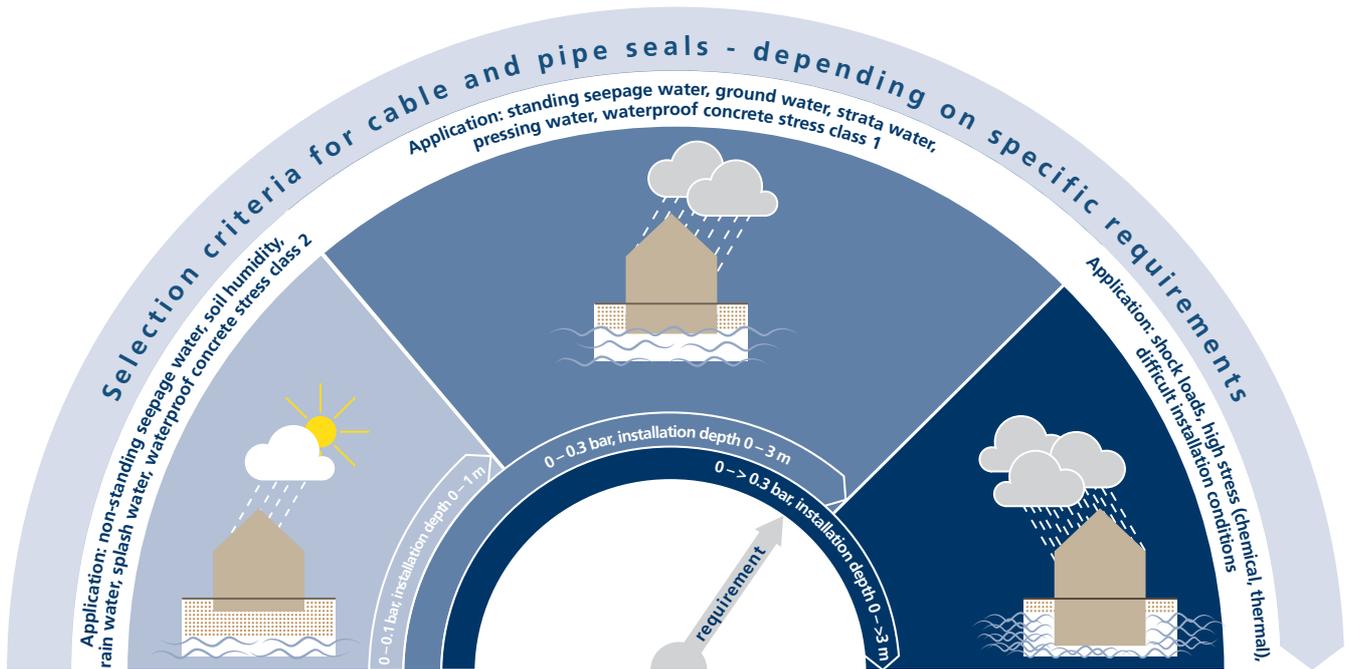

Available rubber quality: EPDM and NBR

Optional accessories - blind plugs

Item	Article code	Suitable for usage with press seals ID (mm)	Image
Blind plug for HSD 250-SSG-159-211-SL	HSD 250 - SSG - D	160	
Blind plug for HSD 300-SSG-200-252-SL	HSD 300 - SSG - D	200	

Application tachometer

To determine your specific requirements

Products according to load cases DIN 18195/stress class waterproof concrete

Standard pipe press seal HSD-SSG

Sealing width 40 mm

Thanks to infinite super segment ring technology suitable for all pipe types.
